An eradication treatment for bedbugs called ThermaPure is a fast, non-chemical cure that leaves behind no residue, odor, or the need for replacing costly furnishings, the manufacturer says. The process, developed by E-Therm, an environmental remediation innovator based in Ventura, Calif., uses superheated ... air to eliminate insect infestations as well as disinfect, decontaminate, and dry out buildings. The room can be treated with everything in place and the treatment will kill bed bugs wherever they may be hiding, according to the manufacturer.
